ABOUT US

Mission Statement

As the nation's leading full-service pediatric medical equipment provider, our mission at PediaCare Medical is to provide the highest levels of service, expertise, advocacy, and education for all children. We believe that effective care starts early, and are committed to improving outcomes for those members of our society that are most dependent on us for their success. It is a privilege for us to serve your children, and it is our promise to honor your trust.

Vision Statement

Our aim is to brighten the lives of all of our patients as we continually lead the world of pediatric medical equipment through our clinical expertise, use of innovative technology, and compassion-driven service.

Our Ethos and Values

Empathy: Serve all children and families with kindness and compassion.

Excellence: Enable families and children to better outcomes with the right medical equipment delivered in a timely manner.

Education: Provide our patients with holistic training and 24/7 access to world-class support.

WELCOME

Thank you for choosing PediaCare Medical! We are privileged to be your choice provider for your pediatric medical equipment needs.

Our mission is to provide your patients with the highest levels of service and expertise. We take our mission as the leading pediatric medical equipment provider seriously and are committed to treating your patients with empathy-driven service and support. Our entire team is dedicated to improved clinical outcomes for all of your patients.

We've developed many resources designed to assist your staff and patients with your equipment requests. Please refer to the order forms and instructional hand-outs contained in this binder, which are also available in Spanish, Creole, and Amharic upon request.

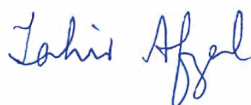

All claims will be handled in the following manner:

If PediaCare Medical is an **In-Network Contracted Provider**, a claim will be submitted to your patient's insurance company for the cost of your medical equipment. Your patient will receive an EOB (Explanation of Benefits) from your insurance company, followed by an invoice from PediaCare Medical requesting your deductible, co-pay, or co-insurance for your medical equipment.

If PediaCare Medical is an **Out-of-Network Contracted Provider**, a claim will be submitted to your patient's insurance company for the cost of your medical equipment. Your patient will receive an EOB (Explanation of Benefits) from your insurance company denying to pay, or pay the full amount, of our claim. This will be followed by an invoice from PediaCare Medical for the *same* deductible, co-pay, or co-insurance for the medical equipment that your patient would have paid under In-Network Contracted Provider rates.

If your patient **does not have Medical Coverage**, please contact our office now at **(800) 409-3962** to see how we can help and ask about our very affordable self-pay rates. If you have any questions regarding an order or are in need of any additional assistance, please contact us at **(800) 409-3962**.

Sincerely,

Tahir Afzal
President

Our Provider Feedback team is always looking for input on how we can service your patients better.

Please feel free to call or e-mail us at (800) 409-3962 or providers@pediacaremedical.com and let us know how we are doing!

OVERVIEW OF SERVICES

Providing high-quality and effective equipment is just one piece of the puzzle. Even the best products are nothing without world-class support and training.

- Activities of Daily Life (ADL's)
- Pulse Oximeters
- and much more!

For our future.

NEBULIZERS

Suffering from a respiratory ailment can be frightening, especially for children and immediate treatment is often required. Treatment options include inhalers, medicine, or a nebulizer machine. A nebulizer is a medication delivery system that is used to treat respiratory illnesses by dilating the bronchial pathways. Additionally, the nebulizer machine can dispense antibiotics and other medication that thins mucous. Because of the way it is administered, a nebulizer has many advantages and benefits compared to other respiratory relief methods such as inhalers, tablets, and liquid medicines. We offer the widest variety of nebulizer options, including child-friendly, portable, ultrasonic, and adult variants available under all insurances.

Over 50 nebulizer options available!

PEDIATRIC SLEEP APNEA AND MONITORING

Overview

Pediatric obstructive sleep apnea is a sleep disorder in which your child's breathing is partially or completely blocked repeatedly during sleep. The condition is due to narrowing or blockage of the upper airway during sleep.

There are differences between pediatric obstructive sleep apnea and adult sleep apnea. While adults usually have daytime sleepiness, children are more likely to have behavioral problems. The underlying cause in adults is often obesity, while in children the most common underlying condition is enlargement of the adenoids and tonsils.

Early diagnosis and treatment are important to prevent complications that can affect children's growth, cognitive development and behavior.

Symptoms

During sleep, signs and symptoms of pediatric sleep apnea might include:

- Snoring
- Pauses in breathing
- Restless sleep
- Mouth breathing
- Snorting, coughing or choking
- Bed wetting
- Sleep terrors

Infants and young children with obstructive sleep apnea don't always snore. They might just have disturbed sleep.

During the day, children with sleep apnea might:

- Perform poorly in school
- Have difficulty paying attention
- Be hyperactive
- Have learning problems
- Have behavioral problems
- Have poor weight gain

Causes

Obesity is a common factor underlying obstructive sleep apnea in adults. But in children the most common condition leading to obstructive sleep apnea is enlarged tonsils and adenoids. However, obesity also plays a role in children. Other underlying factors can be craniofacial anomalies and neuromuscular disorders.

Risk factors

Besides obesity, other risk factors for pediatric sleep apnea include having:

- Down syndrome
- Abnormalities in the skull or face
- Cerebral palsy
- Sickle cell disease
- Neuromuscular disease
- History of low birth weight
- Family history of obstructive sleep apnea

Complications

Pediatric obstructive sleep apnea can have serious complications, including:

- Failure to grow
- Heart problems
- Death

MANUAL MOBILITY

Take some time to consider your wheelchair options and the convenience of added accessories.

Transport chairs: Lightweight with foldable frames, simple to use and easy to transport. A good option to help with occasional, short-term mobility needs.

Standard chairs: Weigh between 37 and 47 pounds. Non-adjustable frames are available in basic seat sizes and include options for height-adjustable armrests and elevating leg rests. A good option if you need a basic mobility device to travel short distances or for short periods of time.

Lightweight chairs: Usually weigh between 24 and 34 pounds. Available in basic seat sizes with some armrest and leg rest options. Low seat height on some models allows you to propel with your feet. An appropriate option if using the chair for several hours during the day, are mildly active and primarily propelling on flat surfaces.

High-strength lightweight chairs: Weigh between 30 and 34 pounds. Various options available to help maintain good seated posture and propel with ease. Good choice if using a manual chair for most of your mobility, are in the chair most of the day and lead a mild to moderately active lifestyle.

Ultra-lightweight chairs: Aluminum frames weigh between 18 and 28 pounds, while titanium frames can weigh as little as 16 pounds. Built for performance, efficiency and ease of maneuverability over varying terrain. A great choice if you use the chair for all your mobility, lead an active lifestyle and/or need individual tailoring for your complex seating and functional needs.

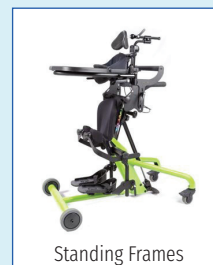

Heavy duty and bariatric chairs: Weigh between 50 and 60 pounds. Larger seat sizes, reinforced upholstery and reinforced frames accommodate user weights from 250 to 1,000 pounds. Available options vary according to the model, chair type and weight capacity.

Accessories to assist you

- Ramps
- Seat and back cushions
- Trays, cup holders
- Cell phone and tablet holders
- Oxygen tank holders
- Gloves
- Vehicle lifts
- Back-of-chair packs
- Under-seat bags
- Wheel lock extensions
- Arm rest bags
- Leg lift straps
- Canopies/covers
- Side guards
- Flags and equipment holders
- Tie-down systems for transport

Bath & Toilet Equipment

Standing Frames

Folding Ramps

MANUAL MOBILITY

Folding children's wheelchairs

Our folding children's wheelchairs are a great option for children with changing needs, whether independent or dependent. They are ideal if your child has changing needs or your family requires a highly portable option for storing in tight spaces or portability by vehicle. Designed specifically for kids, we provide folding wheelchairs that are simple to use, reliable and include built-in adjustments to keep up with your child as they grow!

Rigid children's wheelchairs

We also offer rigid children's wheelchairs that are ideal for active and independent children. Easier to propel, they are highly responsive, lightweight and offer precise control, superb balance and exceptional performance. Pediatric-specific options support children's unique needs, while growth accommodation allows the wheelchair to grow and change as the child's body, lifestyle, environment and skills change.

Reclining and tilt-in-space wheelchairs

With accredited ATP-personnel on staff, you can trust us with your complex rehab needs. Our pediatric reclining and tilt-in-space wheelchairs are designed to improve a child's positioning by helping to facilitate feeding and respiratory function, reduce pressure and improve their line of sight by holding their head upright. Designed specifically for kids, our tilt-in-space wheelchair options simplicity and comfort, with built-in adjustments to keep up with your patient's changing needs.

Early intervention devices

We are proud to offer early intervention devices that are designed to support healthy spinal development for a newborn or toddler. Their portable stroller-style bases include plenty of options to simplify daily care and increase practicality.

POWERED MOBILITY

Complex Power

Complex Power Wheelchairs transform with your child as his or her needs change. This robust system is ideal for progressive disorders because it can be upgraded and altered to match your child's needs over time.

Complex Power-Tilt

Shifting your weight is incredibly important for your child's health. Complex Power Tilt Wheelchairs give your child the ability to shift his or her weight when it's not possible otherwise. Complex Power Tilt Wheelchairs are also highly customizable to match your child's unique body and needs.

Power-Seat Elevator

Power Seat Elevators can get your child eye level and doing everyday tasks minus the challenges of standard-height chairs. Getting vertical can open a whole new world.

Alternative Access Controls

Your child doesn't need a joystick to explore the world. Our individually configured Power Wheelchairs have the ability to move powered by other parts of your child's body. Discover alternative options to a joystick.

All-Terrain

Powering through challenging terrain, like sand and forests, is possible with All-Terrain Wheelchairs. Faster, more heavy-duty chairs can get your child exploring his or her favorite territory.

COMPLEX REHAB

Complex rehab technology (CRT) wheelchair systems are uniquely designed to address the needs of individuals with disabilities. They provide the configurability and functionality critical for maintaining a quality of life and independence. We work with many manufacturers and payors to provide the best positioning and communication systems for your patients. Our clinical team, including our certified Assistive Technology Professional's (ATP) and Occupational Therapist Assistants (OTA) will work diligently with your patient to assess their skills and daily living requirements in order to ensure their freedom and mobility

Complex Manual WCs

- Intended for long-term use
- High Adjustability
- Provides Positioning
- Accommodates Orthopedic Issues

Standard Manual WCs

- Intended for short-term use
- Minimal to Zero Adjustability
- NO Positioning
- NO Orthopedic Accommodations
- Provides NO Pressure Management

Standard Power WCs

- Intended for Ambulatory Limitations
- Basic Joystick Drive ONLY
- NO Positioning
- NO Orthopedic Accommodations
- Provides NO Pressure Management
- NO Ventilator Accommodation

DIAPERS

Urinary incontinence, the lack of control over urination, comes in many forms. Many children experience incontinence, and treatment is available to achieve dryness and comfort. Adjusting to life with incontinence can require some getting used to, as there are so many options to control symptoms. Choosing a product that keeps your child comfortable and protected is important. Be sure to consult with your child's physician to find a solution that works best.

Get the Supplies Your Child Needs

Diapers and approved supplies are covered through Medicaid when a qualified physician diagnoses a child with incontinence. A prescription is needed to receive support through Medicaid. The amount and duration of service depend on an individual basis. If your child is over the age of three and suffers from incontinence, PediaCare Medical can help you get the disposable incontinence supplies needed for your child to stay comfortable. We work with Medicaid to provide your growing child with a free monthly supply of diapers to save families the expense of purchasing diapers from the store. Medicaid supplies diapers to children over the age of three when the following applies:

- The child has a medical condition resulting in incontinence
- Medicaid is the primary or secondary payer

FORMULA

We understand the importance of nutrition and our priority is to help patients get and stay healthy. That starts with your patients being able to access the nutritional product they have been recommended. We strive to increase patient access and improve outcomes by helping providers and patients navigate the complex world of healthcare, including obtaining formula solutions under insurance in states where such coverage has been mandated.

Our Process

Benefit Investigation - We conduct a Benefit Investigation to help you better understand your patient's health plan coverage of available nutrition products and any associated out-of-pocket costs. We can also determine if prior authorization is required by the health plan. To initiate a Benefit Investigation, simply fax us an order form indicating the product required, dosage information, ICD-10 diagnosis, and patient demographics to (888) 367-4530

Prior Authorization Support - We will assist with the prior authorization process to help patients get the appropriate product that you have recommended. When Prior Authorization is required, we will reach out to your office and collect any further required information including payer specific Prior Authorization forms. Additionally, we continually monitor the process by contacting the payer to confirm they received all required information and follow up with the payer to determine the outcome.

Appeal Process Research and Support - PediaCare Medical will review information and contact the payer to understand the cause for denial of our nutrition products and the payer-specific appeal or resubmission process. Our office will then provide next steps to you and follow up with the payer to determine the outcome of the claim appeal or resubmission.

Billing and Coding Information and Support - Through the use of manufacturer-recommended published HCPCS codes, we will bill the patient's insurance and share co-insurance information with the patient.

Required Information

- Patient's Name
- Date of Birth and Diagnosis
- Patient's Phone and Address
- Patient's Insurance information including subscriber's name and relationship to patient
- Insurance Carrier's name, phone, Plan ID, group number or copy of the insurance card
- Product Name
- Dosage Information
- Provider's Name, Phone and Address
- Provider's NPI and Tax ID
- Name of Contact (at provider's office)

Prior Authorization Tips: Prior authorization requirements vary among health care plans. We have an expansive library with forms and documents that may need to be fulfilled by your office in order for the health plan to approve prior authorization. This list does not guarantee prior authorization approval.

- A Statement of Medical Necessity
- The patient's health plan information or copy of their insurance card (front and back)
- Any supporting documentation including:
 - The health plan's prior authorization form
 - Relevant patient history and physical findings
 - Chart notes from the healthcare provider
 - Test and lab results
 - Hospital admission/emergency department notes (if applicable)

BREAST PUMPS

We strive to increase the instance of breastfeeding nationally by providing the best equipment and supplies for ALL moms, creating a community that provides support and education, and settling for nothing less than exceptional customer service. We carry a wide variety of pumps and accessories that we can provide under insurance coverage to your patients.

Choice - We carry one of the largest varieties of insurance and upgrade pumps available in one location.

Expertise - When you contact us, be assured that a knowledgeable, caring staff member will answer any questions you may have and guide you through every step of the process.

Simplicity - Our process is fast and easy; choose a quick online form or fill out a one-page application and we'll do the rest!

Quality - Our brands are among the best known in the business and include Ameda, Ardo, Freemie, Medela, Lansinoh, and Spectra.

FAQ's

Q. How does a patient get a breast pump through their insurance?

A. Breast pumps are covered by most insurance plans and we are a preferred breast pump provider with most PPO insurance policies and some Medicaid plans. Simply fill out our order form for your patient to order an insurance covered breast pump for your patients and one of our breast pump specialists will contact your patient immediately.

Q. What is the benefit of getting a breast pump through PediaCare Medical vs. a retailer?

A. Per the Affordable Care Act, most insurance companies are now covering breast pumps at little to no cost to patients. Insurance companies still have different stipulations and guidelines for the pumps: some require prescriptions, prior authorization, etc. Our breast pump specialists will verify your patient's insurance benefits, obtain any necessary paperwork, and file the claim with your patient's insurance plan. All of our breast pumps come with a manufacturer's warranty. We also verify coverage for additional breast pump supplies after the patient's baby is born.

Q. When can I get a breast pump?

A. Patients can qualify for your breast pump through insurance at any time during their pregnancy and up to one year postpartum. However, some insurance policies may dictate when we are actually able to ship their breast pump.

Q. How long will it take to receive my breast pump after I qualify?

A. Once we've received a prescription order form for your patients, a breast pump specialist will contact them to share more about their options and any guidelines from their insurance plan regarding when the breast pump can be shipped. As soon as the breast pump ships, your patient will be notified.

Q. What is a breast pump upgrade?

A. Insurances will cover all the parts that a patient needs in order to express breast milk. A breast pump upgrade includes convenience items that are not fully covered by a patient's insurance plan and would require an additional fee. We offer a wide variety of comfortable and practical upgrades for your patients at very affordable rates.

Q. Can a patient use their HSA/FSA funds to purchase an upgrade breast pump and breast pump accessories?

A. Our website does accept FSA/HSA cards as a form of payment. Each FSA/HSA plan has different guidelines, so we always recommend that a patient checks their plan for any specific questions.

Q. Can patients return their breast pump?

A. PediaCare Medical does not accept returns on breast pumps. We are on standby 24/7 to assist patient's with their equipment, and work to resolve any issues as soon as they arise. For malfunctioning equipment, patient's are encouraged to directly contact the manufacturer of the equipment as they would ultimately be able to repair or replace a pump and/or supplies as necessary.

Q. What if a breast pump is not working properly?

A. All of our breast pumps come with a manufacturer's warranty. If a patient is experiencing issues with their breast pump, they can contact us and we will provide the correct manufacturer contact information.

Q. Do you offer hospital grade breast pump rentals?

A. Yes, either through insurance depending on your patient's policy or for cash rental at very affordable rates. Some plans do not cover hospital grade breast pumps. These pumps provide a stronger strength suction, special wavelength, and programming that allows a mother with certain medical necessities to produce the maximum amount of breast milk possible. This breast pump is ideal while their child is in the NICU or otherwise unable to feed due to a medical condition. Hospital grade pumps can also help establish or increase milk supply.

Q. Does insurance cover additional supplies?

A. Some insurance plans cover additional supplies after a patient's baby is born. Our breast pump specialists will check the patient's insurance coverage to see if they are eligible.

PHOTOTHERAPY

PediaCare Medical offers same-day service and the most advanced biliblanket phototherapy technology to help infants with hyperbilirubinemia, also known as jaundice. Biliblankets have become a popular treatment option for patients because it allows them to treat their child in the comfort of their home.

While using our units parents can still hold, feed and play with their child. Our biliblanket pads are flexible and come with a disposable sleeve that wraps around the baby's mid-section to provide maximum coverage during phototherapy treatment. Blue light comes through the sleeve, which reduces dangerous bilirubin levels.

If your patient has elevated bilirubin levels (typically between of 10-18 mg/dL), simply fax us a biliblanket order form and we will deliver the equipment to your patient's home **the same day**, so that their family may avoid an otherwise

unnecessary trip to the NICU. We are approved by Medicaid and many private insurances to provide Biliblanket equipment at little or no cost to your patients. By providing your patients with easy-access to a biliblanket, we can avoid a hospital admission and still provide the same care.

In all cases, the quick and effective use of a biliblanket can help a baby have a swift recovery. We even allow our referral offices store a biliblanket on-site in order to quickly address the needs of their patient base.

Same-Day Service

Free Eye Covers Provided

Free On-Site Biliblanket Inventory Available

Neonatal and Toddler Size Wraps Available

All Insurances Accepted

Very Affordable Self-Pay Rates

BRACES AND ORTHOTICS

Overview

We supply a wide range of orthopedic and sports bracing, medical equipment, rehabilitation products, wound care supplies, and product advice. We can help recommend products for a variety of sports injuries, recovery following surgery, and daily activity. PediaCare Medical works diligently to ensure your patients receive the right bracing equipment as we continually expand our portfolio of products for distribution to healthcare facilities and patients. Furthermore, through the use of our manufacturer relationships, experience, and technology we are able to bring value and cost savings to your patients.

Patient Education

Our dedicated team will fit and educate all prescribed products to improve patient outcomes and satisfaction. Our team is committed to exceptional patient care by delivering industry leading SERVICE with a smile and Synergy Medical Systems proudly offers home delivery services in addition to office fittings.

Free On-Site Consignment Inventory

As with all of our equipment, we offer your patients free home or office appointments and free delivery on all of our braces. We even offer free on-site inventory at your facility so that you may be able to give patients the equipment they need on-the-spot immediately!

We will consign best in class products with flexibility and options to exceed provider and patient needs. Consigned product will be organized with bins, labels and pictures as necessary to allow your staff to easily identify the correct product. All of your on-site inventory will be managed (par levels and restocking) by your dedicated account representative.

Proloquo2Go

Speak up with symbol-based AAC

Not being able to speak isn't the same as having nothing to say. Children, teens and adults who can't speak can use this Augmentative and Alternative Communication (AAC) app for iOS as a daily communication tool and to build language skills. From the first time someone opens the app, a few taps are all it takes to start talking to the world.

Learn to communicate with AAC

You'll love how this symbol-based app helps users learn how to express themselves. Proloquo2Go puts the user's development first, with innovative features based on clinical knowledge and user research.

It's also one of the few AAC apps designed to support all users, from beginning to advanced. Completely customizable and designed for a range of fine-motor and visual skills, the app's versatility makes it useful for non-verbal people with autism, Down syndrome, cerebral palsy, and a range of other diagnoses.

CPR, OFFICE TRAINING AND SCRUBS

TREAT YOURSELF TO A DISCOUNT - ASK US FOR INFO!

CPR CLASSES

LET US HELP CERTIFY YOUR STAFF

We've helped thousands of our offices obtain their CPR certification. Our partnered instructors are passionate and highly qualified.

OFFICE TRAINING
